

Blaze Wireless

Fibre-Optic Wireless Broadband Chichester Area

Wireless Broadband proposal

2015

INTRODUCTION

Blaze Wireless LTD is a recently established, local business which uses cutting edge long range wireless technology coupled with carrier grade hardware to deliver high performing Internet to isolated homes and businesses, remote locations and rural communities in West Sussex. Our independent, secure fibre-optic over wireless network is capable of delivering speeds of up to 300Mbps throughout the area including to places where BT broadband is known to be slow and unreliable.

TECHNICAL INFORMATION

Our wireless broadcasting equipment extends our own carrier grade fibre-optic supply circuit, installed in Central Chichester, 'wirelessly' by transmitting it over a selected area, just like a television signal. To benefit from wireless fibre-optic broadband a small receiving aerial, about the size of a paperback book, is required and can be easily installed in a matter of days. Once installed customers can simply connect a computer, laptop, router or private WiFi devices to our wireless internet and enjoy high speed fibre-optic broadband.

INSTALLATION

Recent installations have been extremely successful and are currently providing satisfied customers in Chichester and outlying rural areas with reliable, high speed broadband.

BROADBAND COSTS

Blaze Wireless Internet access starts at a monthly cost of £25. There are no hidden fees, no line rental charge and no fixed term contracts so you can upgrade, downgrade or stop your subscription whenever you wish. A Blaze set up and aerial package costs £80 and comes with fitting instructions for DIY installation. Alternatively Blaze Wireless offers a fitting service for around £65. Data usage and speed is unrestricted during the first month giving customers the opportunity to study data usage and average speeds so that a suitable ongoing monthly service can be tailored to individual user's exact requirements.
